

**Cyber
Capability**

Case Study

Capability Management within Defence

Cyber Capability was engaged to design and implement a Defence Capability Management program. The engagement involved the development of a systematic approach to capability development including;

- Analysing the Defence guidance, subject strategy and policy guidance.
- Developing and documenting a new strategy and technology approach to meeting the subject need, based on the evolving mission threat, emerging technology and growing threat.
- Working with key stakeholders to develop and document the arguments and manage them through the committee process to gain executive endorsement.
- Developing a high-level architecture of the new system, including the integration of contemporary technology, secure architecture and cyber security methodologies.
- Working with other Capability Managers to establish the Multi-Domain Program.

To support this program it was necessary to develop a capability sustainment model based capability management submission schedules and then supporting the process needed for approves, integration into Defence's investment plan, and planning for roll out across the Services. This was and is the task being tackled by Cyber Capability.

**Cyber Capability has been successful
for a number of key reasons:**

- Our ability to take a strategic view and to work through the implications of policy guidance.
- Our deep understanding of the challenges and requirements of the military problem.
- Our familiarity with Defence processes and stakeholder expectations.
- Our familiarity with both contemporary and emerging technologies.
- Our familiarity and deep experience with the design, delivery, operation and governance of cyber security infrastructure.
- Our focus on long term engagement and outcomes.
- Our ability to draw on skilled, highly-credentialed staff with deep domain expertise in both Government and Industry, in skills as broad as Executive Leadership, Enterprise Architecture, Program Management, Service Delivery and ICT operations, and Cyber Security.
